

Section 3 Service Area Map

Neighborhood Service Area Definition Tool

This tool allows Housing and Community Development Section 3 Recipients to identify Targeted Section 3 Workers in accordance with [24 C.F.R. § 75.19](#).

Targeted Section 3 Workers are Section 3 Workers located within a one-mile radius of a Section 3 Project. If fewer than 5,000 people live within a one-mile radius of the project, then the radius is expanded until it is sufficient to encompass a population of 5,000 people according to the most recent census.

To use the tool, complete the following steps:

1. Type in the specific address of the Section 3 Project or a specific mid-point address. The system will automatically provide a sum of the populations of each census tract that are included - in full or in part - within the default 1 mile radius.
2. Use the slider bar to expand the radius of the circle until a population of 5,000 or greater is reached.
