ABOUT THE DIRECTORY

The list of growers include those who have made application for inspection under the seed certification program. The majority of these growers have had several years of experience in the production of seed under the certification program.

In addition to field inspection, all Foundation, Registered, and Certified seed must also meet the requirement for other varieties and/or off types. Seed is not of the Foundation, Registered, or Certified class unless the official label is attached to the container. All Foundation, Registered, and Certified seed must be labeled in compliance with all provisions of the Texas Seed Law.

Orders for Foundation, Registered and Certified seed, therefore, can be accepted by the listed growers only with the understanding that they will be filled when the Foundation, Registered or Certified requirements are completed. Inquiries or orders should be sent directly to the growers or seed dealers.

TEXAS SEED CERTIFICATION

The Seed Certification Law was passed in 1923 and became effective in 1924. The purpose of certification is to create and make available a source of seeds and vegetative propagating materials of crops/plants grown, conditioned and

distributed as to insure genetic purity and identity. The word "seed" as used in this directory includes all propagating materials.

Four classes of seed are recognized in seed certification: Breeder, Foundation, Registered and Certified.

Breeder seed is directly controlled by the originating or sponsoring plant breeding institution, firm or individual, and is the source for the production of seed of the certified classes.

Foundation seed shall be the progeny of Breeder or Foundation seed handled under procedures acceptable to the certifying agency to maintain satisfactory genetic purity and identity. The class is of a quality suitable for the production of Registered or Certified seed.

Registered seeds and plants are the progeny of Breeder or Foundation seed or plants and is produced and handled under procedures established in accordance with federal requirements, by a seed or plant certifying agency for the

Registered class of seed or plants for the purpose of maintaining genetic purity and identity.

Certified seed or plants are the progeny of Breeder, Foundation, or Registered seed or plants, except as otherwise provided by federal law, and produced and handled under procedures established in accordance with federal requirements, by a seed and plant certifying agency for the Certified class of seed or plants for the purpose of maintaining genetic purity and identity.

Selected Texas Native Germplasm is an extension of the Certified class of seed. Only forbs, grasses, and shrubs that are native to and produced in Texas are eligible for certification. This class applies to seed, seedlings, or other propagating materials from untested parentage of rigidly selected Texas native plant stands that have promise, but not proof, of genetic superiority.

Since operation under the rules and regulations of certification is voluntary, inspections are made and labels are issued to only those firms and individuals who may choose to qualify and are in a position to meet all requirements.

Varieties eligible for certification in Texas have resulted either from natural selection or through systematic plant breeding. Seed Certification is a proven method for keeping pedigree records on those approved crop varieties to insure their purity. This is accomplished by close inspection of the seed production field, the harvested seed and other inspections required by the various commodity standards.

Without such a system, seed of new superior varieties would tend to become mixed and contaminated. They would lose their varietal identity and the particular characteristic that made them superior when they were released.

Planting seed bearing the official purple or blue label is the purchaser's assurance that the seed is the variety stated on the label, produced by a reputable concern qualified under the state laws as a certified seed grower, bred and produced in accordance with recognized standards and principles of plant breeding, grown, harvested, conditioned and otherwise prepared for market under regulations of the State Seed and Plant Board and direct supervision of the Commissioner of Agriculture. The official label can be secured only by those persons or firms who voluntarily apply and submit their planting seed projects to the close supervision, inspection and approval of the certifying authorities.

IMPORTANT NOTICE

All Foundation seed is labeled with a label printed on white background, all Registered seed is labeled with a label printed on a purple background and all Certified seed is labeled with a label printed on a blue background. In addition to the information as to the variety and the name of the producer, all labels bear the imprint of the state seal of Texas. ONLY SUCH LABELS ARE OFFICIAL.

All Foundation, Registered and Certified seed must be packed in new even weight containers and each container shall be labeled in accordance with the TEXAS SEED LAW. The Registered class of small grains and rice and the certified class of any crop kind may be sold in bulk, provided the identity of the seed is carefully maintained, the seed is handled in a manner which prevents a mixture and a bulk certificate accompany the movement of seed.

If you have any questions, please contact:
